

Empathy Map

Food Ordering Behaviour and Consumer Trends

Three primary personas were considered while designing the dashboard and story: a Business Analyst, an Operations Manager, and a regular Customer.

User

Rahul Sharma - Business Analyst

SAYS

- Which cities and cuisines drive the most orders?
- How is order value trending over time?
- Which meal type generates the highest demand?

THINKS

- We need clear, city-wise and cuisine-wise demand insights.
- Strategic decisions should be backed by data, not guesswork.
- We must track how demand shifts across time periods.

DOES

- Studies Order Value and Meal Type metrics in Tableau.
- Compares cuisine performance across cities.
- Tracks changes in demand over time to spot emerging trends.

FEELS

- Wants accurate, at-a-glance business reports.
 - Needs the dashboard to support fast, confident decisions.
 - Wants offerings aligned with evolving customer needs.
-

User

Priya Mehta - Operations Manager

SAYS

- Where are deliveries taking longer than expected?
- Which cities need more delivery resources?
- Are we consistent during peak hours?

THINKS

- Delivery delays hurt customer satisfaction.
- Resources should be allocated to high-demand areas.
- Peak-hour workload needs to be balanced across the city.

DOES

- Analyzes delivery time distribution and order volume by city.

- Monitors peak hours and workload distribution.
- Uses dashboard filters to isolate underperforming regions.

FEELS

- Wants faster, more consistent deliveries.
 - Feels responsible for closing service gaps quickly.
 - Values a dashboard that flags problems early.
-

User

Neha Reddy - Customer

SAYS

- Is my food going to arrive quickly?
- Am I getting good value for the delivery fee I pay?
- Which cuisines are available near me?

THINKS

- Quick delivery and reasonable pricing matter most.
- A wide variety of cuisine options improves my experience.
- If service is good, I will keep ordering from the same platform.

DOES

- Orders mostly during lunch and dinner for convenience.
- Compares cuisines and prices before ordering.
- Reorders when delivery time and pricing meet expectations.

FEELS

- Satisfied when delivery is timely and food quality is good.
 - Frustrated by long delivery times or high delivery fees.
 - Loyal to platforms that consistently meet expectations.
-

Pain Points

- Large volume of raw order data with no easy way to spot patterns.
- Difficulty comparing delivery performance across cities.
- Limited visibility into which cuisines/meal types drive revenue.

Goals

- Increase customer satisfaction through faster, more reliable delivery.
- Improve revenue by focusing on high-demand cuisines and cities.
- Optimize delivery operations using data-driven resource planning.
- Enable everyone to make decisions using one shared Tableau dashboard.
