

Solution Requirement

Food Ordering Behaviour and Consumer Trends

Functional Requirements

- Import the food ordering dataset into Tableau.
- Clean and prepare the dataset (Order ID, Order Value, Delivery Fee, Cuisine, Meal Type, City, Time Taken for Delivery) for analysis.
- Generate business KPIs such as Total Orders, Average Delivery Time, and Top Cuisine.
- Create interactive charts and visualizations for demand, spending, and delivery performance.
- Enable filtering by City, Cuisine, and Meal Type.
- Build a responsive, multi-view interactive dashboard.
- Create a Tableau Story that walks through the key business insights.
- Embed the dashboard and story inside a Flask web application.

Non-Functional Requirements

- User-friendly, responsive interface across desktop and mobile.
- Fast dashboard load and filter response time.
- Accurate, consistent data visualization.
- Reliable web integration with minimal downtime.
- Codebase that is easy to maintain and extend.

Expected Outcome

The proposed solution gives a clear visual picture of food ordering behaviour, helping the Business Analyst, Operations Manager, and platform stakeholders identify trends, monitor performance, and make informed, timely decisions.
